

Conference for Forestry

in Luxembourg

Create and value a climate change resilient forest

**Tuesday, 29th October 2024,
Luxembourg city.**

The president of the LuxAA will introduce the various techniques anti drought/fire used worldwide in forests by a proper management of the water cycle and of the landscape.

Another expert, **M^{rs} Marie Stella Duchiron**, franco-german independent forestry expert, author of numerous best seller forestry books, will then introduce the proper techniques to make your forest face climate change efficiently.

Marie Stella will also introduce how you can best estimate the value of a forest, invest wisely & risklessly and maximise the value over time by a proper sustainable forestry strategy.

This one day technical conference prepares our 2 days international event of 26/27th march 2025, the famous "International forestry investors conference" held for the first time in Luxembourg, in partnership with Dana, New Zealand.

Attendees of the conference can also meet innovative luxembourgish start ups and service providers in forestry in the conference premises.

Anyone can become a member of the LuxAA and attend this conference

Conference language :

Français

English / Deutsch: upon request
